## Force.com Development Services

Force.com cloud computing platform from Salesforce.com has become the industry's most sought after Cloud development platform. Its highly scalable, flexible and secure cloud computing platform helps Independent Software Vendors (ISVs) to develop products faster and at a lower costs as compared to traditional software platforms. We have extensive Force.com development expertise to help you with product development on Force.com. Our proven delivery model helps clients in cost reduction compared to traditional development.

End to End Application Development Services

# DEVELOPMENT SERVICES

## Requirements Analysis Services

Starting from whether the Force.com is the right choice for your app, we provide end to end Force.com Requirements Analysis services. We help our clients with Process mapping, Business requirements analysis, Feasibility study, Prototype, and Cost benefit analysis.

## Force.com Design Services

Considering that design is the foundation of any successful app we give extra focus to our Force.com Design services. A good design ensures that the developed application is highly customizable and can be integrated with other applications easily. Our Force.com Design services include Solution Design, Architecture Design, Technical Design, and User Experience Design.

## Force.com Development Services

We develop Force.com applications for business & enterprises with highly efficient code. Our Force.com development services include User Interface (UI) development, Apex & Visualforce Programming and Integration.

## Force.com Testing Services

We offer independent Testing services for applications developed on Force.com. Our testing services include – unit testing, system testing, functional testing, Regression and smoke testing, Alpha and Beta Testing. We offer both automated and manual testing.

## Force.com Deployment / Distribution Services

We help clients deploy their Force.com applications within their Salesforce.com ORGs or on Appexchange. Our Force.com Deployment services include Package apps, Appexchange Deployment, Security Review, Deploy apps (Publish), Manage packages, Training and custom Integration.

## Development Methodology

We use Agile software development methodology to give our clients a quick turnaround time for product delivery and subsequent releases. The Agile development methodology uses techniques of adaptive planning, evolutionary development/delivery and time based iterative approach. This methodology ensures rapid and flexible response to change and promotes development, teamwork, collaboration throughout the life-cycle of the project resulting in faster turnaround and better quality.
