Property Cloud -
# End to End Solution for Property Developers & Managers augmenting Salesforce.com CRM

Property Cloud is an extension to Salesforce.com CRM that helps in simplifying the processes of real estate developers including bookings, checking the real time property inventory, calculating brokerage, tracking payment milestones, making service tax calculations, processing the property allotment & transfers, invoicing customers and aiding in collections.

Property Cloud enables you to track each property unit as an inventory – enabling you define property attributes and gain complete visibility. Get real time information on booking, payment details, transaction history – all at one place.
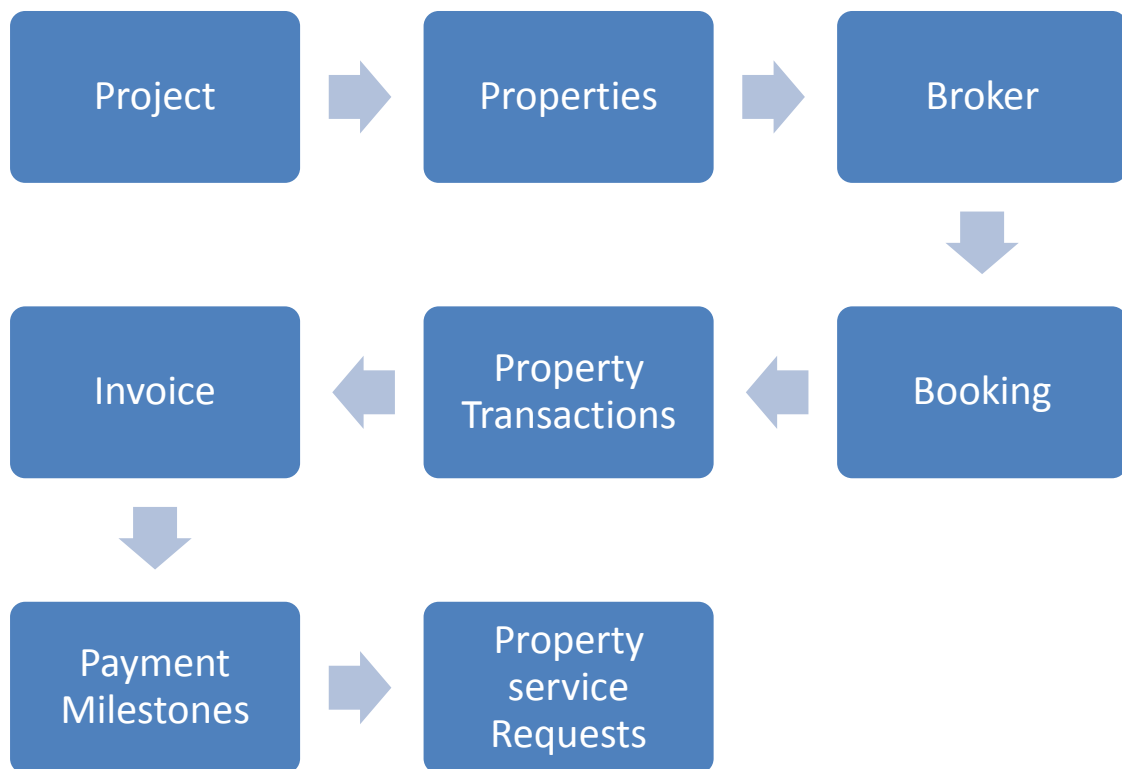

Property Cloud makes your invoicing and payments tracking simpler and automated. You can also track transactions such as registrations, possession, transfer, cancellation, allotment or surrender within system.

With Property Cloud tracking Broker and Sales Team performance is simple. Use leader-boards to motivate your sales team achieve better results than ever.
